Subject: [External] In regards to Dominion energy net metering tariff

To Whom it may Concern,

I am writing in regards to Dominion Energy's attempts to raise solar customers' basic service charge and a solar subscription fee which is clearly an attempt to hinder customers' ability and willingness to use solar energy in our state. This is an attempt by this company to maintain control over the energy markets and to derail competition. This is very unfortunate as solar energy is not only a way to decrease our dependence on fossil fuels, but also a robust industry in our state that creates numerous jobs and helps our economy.

I am urging the SC PSC to reject this proposal.

As my family hopes to install solar panels in the near future, I am very hopeful you will listen to the states consumers
